Everyday Mathematics for Parents The University of Chicago School Mathematics Project 2017-07-10 The Everyday Mathematics (EM) program was developed by the University of Chicago School Mathematics Project (UCSMP) and is now used in more than 185,000 classrooms by almost three million students. Its research-based learning delivers the kinds of results that all school districts aspire to. Yet despite that tremendous success, EM often leaves parents perplexed. Learning is accomplished not through rote memorization, but by actually engaging in real-life math tasks. The curriculum isn't linear, but rather spirals back and forth, weaving concepts in and out of lessons that build overall understanding and long-term retention. It's no wonder that many parents have difficulty navigating this innovative mathematical and pedagogic terrain. Now help is here. Inspired by UCSMP's firsthand experiences with parents and teachers, *Everyday Mathematics for Parents* will equip parents with an understanding of EM and enable them to help their children with homework—the heart of the great parental adventure of ensuring that children become mathematically proficient. Featuring accessible explanations of the research-based philosophy and design of the program, and insights into the strengths of EM, this little book provides the big-picture information that parents need. Clear descriptions of how and why this approach is different are paired with illustrative tables that underscore the unique attributes of EM. Detailed guidance for assisting students with homework includes explanations of the key EM concepts that underlie each assignment. Resources for helping students practice math more at home also provide an understanding of the long-term utility of EM. Easy to use, yet jam-packed with knowledge and helpful tips, *Everyday Mathematics for Parents* will become a pocket mentor to parents and teachers new to EM who are ready to step up and help children succeed. With this book in hand, you'll finally understand that while this may not be the way that you learned math, it's actually much better.

Pre-Transition Mathematics John W. McConnell 2008-03-30 The UCSMP Third Edition curriculum emphasizes problem solving, everyday applications, and the use of technology and reading, while developing and maintaining basic skills. UCSMP Pre-Transition Mathematics is intended primarily for students who are ready for a 6th-grade curriculum. It articulates well with Grade 5 of *Everyday Mathematics*, *Transition Mathematics*, and *Algebra*. Pre-Transition Mathematics reflects the practice of identifying and working on uses of numbers and operations that characterized the Second Edition of *Transition Mathematics*. Fractions and percents are particularly emphasized. There is also a major emphasis on dealing with data and geometry. Algebra is integrated throughout the text as a way of describing generalizations, as a language for formulas, and as an aid in solving simple equations. The text is characterized by rich problems throughout. Learn more about this program by clicking on the E-Sampler, here.

University of Chicago School Mathematics Project 6-12 Curriculum. What Works Clearinghouse Intervention Report What Works Clearinghouse (ED) 2011 The "University of Chicago School Mathematics Project ("UCSMP") 6-12 Curriculum" is a series of yearlong courses--(1) *Transition Mathematics*; (2) *Algebra*; (3) *Geometry*; (4) *Advanced Algebra*; (5) *Functions, Statistics, and Trigonometry*; and (6) *Precalculus and Discrete Mathematics*--emphasizing problem solving, real-world applications, and the use of technology. The program is designed to allow schools to offer the appropriate math to students regardless of grade level. Beginning with the *Algebra* course, technology is used in the classroom to aid in the development of properties and skills, and graphing calculators are used to complete assignments at all levels. The *What Works Clearinghouse* (WWC) High School Math topic area reviewed 20 studies on the "UCSMP". Two of these studies meet WWC evidence standards with reservations; the remaining 18 studies do not meet either WWC evidence standards or eligibility screens. Based on the two studies, the WWC found potentially positive effects in math achievement for high school students. The conclusions presented in this report may change as new research emerges. Appended are: (1) Study characteristics; (2) Outcome measures for the math achievement domain; (3) Summary of study findings included in the rating for the math achievement domain; (4) "UCSMP" rating for the math achievement domain; and (5) Extent of evidence by domain. (Contains 9 footnotes.).
